

# Combined CAR/NAR/TRA Certified Rocket Motors List

As a service to NAR members, the NAR Standards and Testing Committee (S&T) publishes a list of all rocket motors certified for use at NAR launches. As the NAR, the Tripoli Rocketry Association (TRA), and the Canadian Association of Rocketry (CAR) maintain a reciprocal certification policy, motors certified by all organizations are included in this list. Members of all organizations may use motors certified by any organization as long as the motor has been approved for transportation in your country (DOT certification in the USA).

This list may indicate that a motor is "expiring" on a given date. This means its certification for general use will be withdrawn on the indicated date. The expiration date is three years after the motor is deemed de-certified, to give flyers time to use up any motors they have already purchased. After the expiration date passes, the motors can no longer be used. Note that once a motor is listed as expiring, newly manufactured motors of the same type are not automatically certified for use. They will have to be re-tested for certification and will then be listed separately.

Additions, deletions, and other changes to the list of NAR-certified motors will be published in NAR journals as they become available. They will also be published electronically at the following Web site:

- NAR Web site [nar.org](http://nar.org)

Individuals, such as Contest Directors, requiring the very latest list of NAR certified motors may contact the S&T Secretary:

Ed Pattison-Gordon  
[rdedwa@comcast.net](mailto:rdedwa@comcast.net)

Questions may also be directed to the S&T Chairs:

Jack Kane  
23 Bungay Road  
Mansfield, MA 02048

John Lyngdal  
17775 SW Janell Court  
Beaverton, OR 97006  
503-341-8858  
[john.w.lyngdal@exgate.tek.com](mailto:john.w.lyngdal@exgate.tek.com)

Questions regarding motors not tested by NAR S&T should be directed to:

- TRA: Alan Whitmore, Chair, Tripoli Rocketry Association Motor Test Committee
- CAR: Thomas Raithby, Chair, Canadian Association of Rocketry Motor Testing

Order printed copies of the S&T Motor Data Sheets from NARTS if you want more information. This report consists of data sheets for each motor currently certified by NAR S&T. Each data sheet contains a thrust curve together with test firing values, including measured average thrust and total impulse, plus 32 data points for use in altitude simulation computer programs.

## Key to Motor Type

- S - Denotes single-use motor.
- R - Denotes a reloadable motor certified only with the manufacturer's casing, closures, nozzle, and propellant.
- H - Denotes a hybrid motor.
- T - Denotes a tribrid motor.
- ! - Denotes a sparky motor, also high-lighted in yellow: extra caution required.
- (a) - Certified for use in Animal hardware only
- (HP) - Treat motor as a high power motor regardless of its total impulse.

## Key to Delay Types

- number list - motors are made for each of the specified delays
- numberA - motor comes in one delay but can be shortened with manufacturer's Delay Adjustment Tool
- P - motor is plugged: it has no ejection charge or tracking smoke
- PS - motor is plugged but does emit tracking smoke

## Note on Delays

Delays are measured to see if the value falls within a range of the value claimed by the manufacturer. NFPA Code 1125 specifies the range to be from minus 20% of the claimed value to plus 20%, but no less than 1.5 seconds and no greater than 3 seconds. For example, a motor that claims to have a 10 second delay satisfies the NFPA requirement if it has an 8 second delay or a 12 second delay or anything in between because those values are within 20%.

A motor with a claimed 4 second delay meets the NFPA code if the measured delay is 2.5 to 5.5 seconds, not 3.2 to 4.8 seconds, because 1.5 is greater than 0.8 (20% of 4).

A motor that claims a 20 second delay passes if the measured values are 17 to 23 seconds, not 16 to 24 seconds, because 3 is the maximum and 20% of 20 is 4.

Adjustable delays are tested using the longest delay (unadjusted) and shorter delays created using the manufacturer's delay adjustment tool (DAT). The motor satisfies the NFPA requirement if the measured values of the longest delay and each of the adjusted delays fall within the allowed range. For example, using a DAT with settings for removing 3, 5, and 7 seconds, on a motor with a 10 second unadjusted delay, the motor will satisfy NFPA 1125 if the measured values fall within these ranges:

<b>DAT Setting</b>	<b>Expected Delay</b>	<b>Passing Value</b>	<b>Method</b>
Not used	10	8 - 12	20%
-3	7	5.6 - 8.4	20%
-5	5	3.5 - 6.5	1.5
-7	3	1.5 - 4.5	1.5

Another thing to consider is that delays in composite motors can be affected by altitude. NFPA Code 1125 requires that testing take place at sea level, but experiments performed by both NAR S&T and Tripoli Motor Testing show that composite motor delays can burn more slowly as launch altitude increases by thousands of feet. So even though a motor's delays meets NFPA requirements, the actual delay seen for a rocket launched from 5000 feet may be longer.

## Key to Manufacturer Abbreviations

- AeroTech - AeroTech, ISP, or Dr Rocket
- Alpha - Alpha Hybrid Rocketry, LLC
- Animal - Animal Motor Works
- Apogee - Apogee Components
- Cesaroni - Cesaroni Technology Inc.
- Contrail - Contrail Rockets LLC
- Estes - Estes Industries
- Gorilla - Gorilla Motor
- Hypertek - Hypertek
- Kosdon/AT - Kosdon by AeroTech
- Loki - Loki Research
- PML - Public Missiles Ltd.
- Propulsion - Propulsion Polymers
- Q-Jet/AT - Q-Jet by AeroTech
- Quest - Quest Aerospace
- RATTworks - R.A.T.T. Works Precision Rocket Motors
- Roadrunner - RoadRunner Rocketry
- SkyRipper - Sky Ripper Systems
- WCH - West Coast Hybrids

## Propellant Mass Abbreviations

cc - (cubic centimeters) indicates the volume of nitrous oxide in a hybrid motor

## Key to Contest Approved Entries

- Yes - Motor allowed for NAR contests.
- PENDING - Not currently allowed for contests, but expected to become so.
- HPR - Not allowed for contests because it's a high-power motor.
- No - Not allowed for contests because it is not widely available.

Note: "Contest approved" means approved for use in contests flown under the NAR US Model Rocket Sporting Code. This is not the same as approved for use in other contests, such as TARC or FAI.

## Note

N/A - in any column indicates information not provided by the certifying organization

**Prepared:** 2023 November 18
