Design is a distant ancestor of the "Fish N' Chips" plan in the MIT glider design handbook. Model flies using a 13mm pod, on 1/4A3-3T engine. It is piston-launched. Without a piston, it would eject significantly after apogee. (If this rectangle does not print at 2-1/8" wide by 4" tall, then the full size templates will not be printed at the correct size.)

Use your favorite Pop-Pod hook attachment method. Prototype uses "L" type cast hook and 13mm "spooler" type pod.

Glide CG about 1" behind Leading Edge at root

Approx. 1 degree incidence

1 degree angle reference

Side view at 50% scale

Top view at 50% scale

Fuselage 1/16" x 1/8" Spruce, 10" long

Wing 1/16" Light Balsa

Rudder & Stab: 1/32" medium Balsa

Glide CG about 1" behind Leading Edge at root

Prototype uses "L" type cast hook and 13mm "spooler" type pod

Use your favorite Pop-Pod hook attachment method.
